Dear Ladies and Gentlemen,

With this, you receive the Volmary Young Plants & Seeds Catalogue Spring 2025.

The range consists of our strongest varieties and has been expanded with many innovations. All varieties have performed excellently in international comparisons.

An exciting alternative to vigorous, early-flowering fuchsia classics is our upright-growing **'Fuchsita® XL'** series. Due to its branching and medium growth, it is ideal for retail and production businesses. Particularly attractive are the bright double flowers of our new product the **'Fuchsita® XL Double Rose-White'.**
Delosperma is known as a drought-tolerant rock garden shrub. Our **'Suntropics®'** are sunny, permanently flowering plants for cultivation outdoors or in a polytunnel. The wide range of colours of this series is enchanting. It has now been expanded to include the variety **'Suntropics® Pink Sun'**, whose pink flowers have a yellow centre.
Salvia x hybrida 'Salgoon®' also impresses with its high drought and heat tolerance. This new series blooms from early spring to late autumn, with many firm, well-filled spikes that magically attract bees. 'Salgoon®' is one of the earliest salvias on the market and is therefore suitable for marketing for the bed & balcony gardening season and the summer potting season.
Our location for herb and vegetable seedlings is now certified as organic and ready for the production of organic seedlings with organic certification. Whether organic or conventional, this enables our customers to make an important building block in the production chain sustainable by using organic seedlings produced in Germany.
In view of this development, we will be offering organic variants of our successful seedling herbs and vegetatively propagated vegetables, such as the popular sweet potatoes in the **'Erato®'** series, among others, to all customers In addition, we will also be offering our vegetatively propagated soft fruit range in organic versions. As a result, Volmary is taking a major step forward in supplying production business for both the specialist gardening trade and the food retail trade with organically produced seedlings across their entire range.

Many gardeners and marketers have recognized that good results can be achieved through targeted marketing work in partnership. Volmary makes a convincing impression about the product, in sales as well as online and creates emotional **Volmary® brand experience** with the colourful garden retail brand **Volmary®**.

The **Volmary online portal** offers you the possibility to order seeds & young plants around the clock, as well as many other advantages, such as insight into current availabilities and **marketing materials** for your sales.

The best products and targeted information are your success! Our international connections to science, breeders, young plant producers, production nursery, marketers and media provide you with leading breeding and first-hand knowledge. Take advantage of Volmary. Our experienced staff in the **office and field service** will advise you confidentially on questions of variety and culture.

With kind regards

Management and staff

Products with the highest quality standards

The Volmary® young plant production produces Volmary® young plants using the latest seed and greenhouse technology. Work steps are supported by precise seeding technology and climate control. A computer-aided quality assurance system allows the delivery of high-quality, fully equipped trays. Our efficient logistics can deliver young plants reliably and in the shortest possible time. These guarantee our high-quality standard and enable a safe and successful further culture.

Exclusive varieties

New and particularly powerful varieties are paramount for offering your customers a modern and high-quality assortment of flowers and vegetables. Volmary®'s Plant Breeding and Information Centre in Münster offers great opportunities to become familiar with new varieties. Exact, practice-relevant cultural recommendations emerge from intensive varietal tests. All new varieties undergo multi-annual tests in Volmary® greenhouses and on their own Volmary® test fields, being also tested for outdoor and bed suitability

Volmary offers a wide range of organic vegetables, herbs and fruit – and organic flowers are also available to you by arrangement. You will receive the full selection of organic young plants, organic cuttings (URC) and organic seeds.
We supply unrooted organic cuttings from our EU-certified mother plants. With Volmary's large selection of organic products, you can optimally plan the range for sustainable organic production.

And additional offers such as Multikraft® products let you implement a sustainable production approach. Please contact us, we shall gladly inform you.

MULTIKRAFT® PLANT STRENGTHENING

Naturally effective

The family-owned company Multikraft® is the leading developer and manufacturer of effective micro-organisms. With the help of this technology, Multikraft® produces ecological products with sustainable benefits for humans, animals, and the environment. Multikraft® works with nature as a model, promotes its regeneration and strengthens natural processes. To advance these processes, we rely on the smallest organisms – microorganisms that underlie all life on earth. The use of Multikraft® plant strengthening agents favours root formation and increases the resistance of plants to soil-borne diseases and pests. Furthermore, they boost germination, flowering, fruits, plant ripening and flower luminosity. This allows reducing or entirely doing away with pesticides.

The All-In-One products **MK Start, MK Gemüse** and **MK Blume** are particularly easy to use and prevent fungal diseases and pests. Stable growth and good branching is promoted by regular application via leaf spraying. Multikraft® products have been successfully deployed in ornamental plant and vegetable cultivation for years and offer an excellent opportunity to produce more environmentally friendly products. You can also do gardening with the power of nature.

Your Volmary® contact person will be happy to inform you about Multikraft®.

HIGH-QUALITY CUTTINGS

directly from our certified mother plant locations.

In addition to its rooted seedlings in various tray sizes, Volmary offers a wide range of unrooted cuttings (URCs) for specialised production companies. Larger undertakings, especially, will appreciate the possibility of obtaining unrooted cuttings directly from our mother plant farms, with the appropriate expertise and free capacities. Due to the standardised preparation and uniformity of the cuttings, almost all varieties are also ideal for the use of cutting robots.

Sustainability has a tradition in our family business. That is why we are constantly optimising our production processes to ensure sustainable and responsible use of resources. We are also committed to the well-being of our staff and the protection of the environment. Our international production sites are MPS-certified, which guarantees you the highest-quality raw material as a customer. International sustainability standards at various locations confirm our successes in sustainable business.
This is also shown by the Fairtrade certification of our mother plant location in Kenya. Fairtrade promotes better working and living conditions in the certified mother plant farms as well as environmental protection. Thanks to the sale of Fairtrade cuttings, Fairtrade producers benefit from fairer trading conditions and can achieve improvements in social and environmental aspects. Strict Fairtrade standards improve social sustainability and protect the environment in the countries of cultivation.
What's more, as the Volmary Group, we also have ORGANIC certification as well as the GLOBALG.A.P. certification.

MARIGOLDS FOR FIGHTING NEMATODES ASTERACEAE

1000		°C		
6-10*/15-20**	V-VII	15-18	10-17	-

*) Early sowing: 6-10 kg/ha
**) Late sowing: 15-20 kg/ha

In some areas of horticulture, nematodes have led to reduced yields or have even caused problems with total crop losses. One way of fighting these pests in the soil is by sowing Tagetes before the start of cultivation.

Type				
Nema	18-22	OUT	-	-
Single Gold	18-22	OUT	-	-

NEMA MIX

- A vigorous variety with good ground coverage and branching
- Good formation of crop material and root mass
- Good weed control in practice

1. Resistances

1.1 Terminology

There are different degrees of specification for pests or pathogens in their relationship to plants. The determination of this specification usually requires highly sophisticated analysis techniques. The answer to the question whether a plant can be affected by a pest or pathogen perhaps depends on the applied analysis procedure. It is important to emphasise that the specification of pests and pathogen can generally be subject to temporal and regional fluctuations. The specification also depends on ecological factors, and new harmful organisms or new strains of pathogenic agents that are able to withstand the resistances may develop.

1.2 Definitions

Immunity:
Neither subject to attack by a certain pest nor infection by a certain pathogen.

Resistance:
The ability of a plant type to limit the growth and development of a certain pest or pathogen and/or the damage caused in comparison with susceptible plant types under comparable environmental conditions and pest and pathogen pressure. Under high pest and pathogen pressure, resistant varieties may exhibit some disease symptoms or damage.

Two resistance degrees are defined:

High/standard resistance (HR):
Plant types that highly limit the growth and development of a certain pest or pathogen under normal pest or pathogen pressure in comparison with susceptible plant types. These plant types, however, may exhibit some symptoms or damage under high pest and pathogen pressure.

Moderate/intermediate resistance (IR):
Plant types that limit the growth and development of a certain pest or pathogen, but may exhibit more symptoms or damage in comparison with resistant varieties. Moderate/intermediate resistant varieties will still have less serious symptoms or damages that susceptible plant types when grown under comparable environmental conditions and/or pest and pathogen pressure.

Susceptibility:
The susceptibility of a plant type is the inability of it to limit the growth and development of a certain pest or pathogen.

1.3 Variety Resistance Information

The resistances of our breedings are coded if they have not been noted elsewhere.

For varieties with resistances to more than one pathogen, resistance codes are separated by "/". If a resistance code refers to a particular disease strain, there is no protection against another strain of this pathogen. If the resistance indication does not refer to a certain strain of a pathogen but to uncertain, non-specified strains, it cannot be guaranteed that the respective variety could nevertheless be infected by the stated pathogen.

The resistances indicated in the catalogue are based on current knowledge at the time of printing. A breaking of resistances by the respective pest, however, cannot be excluded.
